Subcategory ID

Subject Coincident searches targeting data sets not conforming to all ECS data dictionary requirements (i.e., non-ECS data sets)

Description of Problem or Suggestion:

It appears that the Earth Science Search Tool will not alert the user that, although certain data sets may intersect the space or time or parameter-value of the requested JOIN, those data sets provide inadequate metadata to be included in the coincident search.

The user should be provided a list of those data sets (not granules) that were excluded on the basis of inadequate/inappropriate metadata.

Originator's Recommendation

Map the suggestion to an ECS requirement - extensibility?
